" 100 % Environmental Compliance To DOE Industrial Effluent Standard B"

"If fail, subject to Max Fine of RM 100,000 and Max Imprisonment of 5 years or Both "

DOE Standard B:

- * COD = 200 mg/l
- * BOD = 50 mg/l
- * Zinc = 2 mg/l
- * O&G = 10 mg/l
- * pH = 5.5 - 9.0
- * TSS = 100 mg/l

Environmental Fact:

97% of water is salty or otherwise undrinkable, & almost 3% is locked away in ice caps, glaciers or deep underground. It is estimated that only 0.003% is actually available for use. If all the earth's water is represented by a litre, only a teaspoon is available for us to use.

Everyday you see people leaving the tap running while doing other chores. IF we do not start repenting from wasting water, We might end up having to drink our own treated sewage water in the future.
